Projects

Virtual 6502 Processor
Developed a fully functioning virtual Computer that included a Clock, CPU, Random Access Memory, Memory Management Unit, Interrupt Controller, Virtual Keyboard and a full Ascii Library. The computer is able to run a variety of programs in machine language including the Fibonacci sequence and other commonly used programs.
Implemented object oriented principles in conjunction with a variety of data structures and algorithms.
Technologies used:

- *Node Js, JavaScript, TypeScript, Git*

Amazon Clone
Full stack web app of amazon.com. The site is a fully functional e-commerce store that includes payment processing with stripe. Firebase was used for user authentication and to store data for previous orders as well.
Technologies used:

- React, Firebase, Stripe

Netflix Clone
Utilized React js to make a clone of the netflix website. Movie data was fetched from the MovieDb Api with Axios
Technologies used:

- React, Firebase, Git

Covid-19-Tracker
A front end web page of a real time covid-19 tracker. Data was fetched from the disease-sh api. Chart Js was also used or the chart on the page, in addition to Material Ui for styling

- React, Firebase, Material Ui, Leaflet js, Chart Js
